

QUANTILE MAPPING AND DELTA METHODS

An aerial photograph of a residential neighborhood that has been completely inundated with floodwater. The water is a murky, brownish-grey color, covering the streets, lawns, and yards. Numerous houses with various roof colors (brown, grey, red) are visible, some with only their roofs and upper floors above water. Large green trees are scattered throughout the area, some with their lower branches submerged. A few cars are partially visible in the water. In the background, a line of trees separates the flooded area from a greener, less flooded region. A river or canal is visible on the right side of the image.
